- 1 Varicella

65+ years

- 1 Td (booster)
- 1 Flu
- 1 Pneumococcal

<sup>1</sup>**Influenza** shot is only given during flu season and is given annually. If there is no flu in their record, and it is not flu season, they do not need it. If you have a question about when flu season is, contact the Immunizations Corpsman or Preventive Medicine.

<sup>2</sup>**Varicella** is not required to people who report to have had chicken pox.

<sup>3</sup>**Pneumococcal** is not required for everyone on this age group. However, it may be required for adults 50-64 years of age with risk factors. This is given every 5 years, **ONLY** for elder adults at highest risk. If you have any question concerning the patient's need for this vaccine, contact that patients Primary Care Manager (PCM/Doctor).
